

SHALLOW FIBERGLASS DISPENSER CONTAINMENT SYSTEM

MODEL B-3000

Featuring the Patented Float-Trip Amplification Mechanism

B-3000

The shallow "Bravo Box" is the world's first and foremost secondary containment system for dispensers.

The B-3000, the original shallow Bravo Box, is factory equipped with the patented Float-Trip Amplification Mechanism that shuts down the impact valve of the product when approximately 5-oz. of fuel is captured in the float reservoir. All remaining dispensers, as well as the other products in the leaking dispenser continue in operation.

The B-3000's design assures lasting integrity, safety and low-cost retrofitting when a change in dispenser is anticipated.

- UL listed bracket system
- Rugged steel construction, fiberglass pan
- Factory pre-tested
- Fully equipped for contractor-friendly field installation
- Compatible with all fuels
